Kyrel Oy – Customer-oriented, Professional Finnish Electronic Assembly Services

The story of the Kyrel Oy family business began in 1978 in a garage in Kyröskoski. Now our company is one of Finland's most successful and completely domestic contract manufacturer offering assembly services for electronics, mechanics and electromechanics.

One of our strengths is a strong desire to develop. In recent years, we have invested millions of euros in production equipment, increased our efficiency with versatile IT background systems, and created applications for the automatic collection, analysis and reporting of data covering almost all of our operations.

We provide services for more than 80 companies that operate e.g. in the fields of industrial, vehicle, consumer and hospital electronics as well as telecommunications, defense technology and LED lighting. IoT is strongly involved in development.

Welcome, we are at your service!

**“Finnish
Quality
is an
Advantage”**

As a Customer You are at the Heart of Our Operations

VOLUME SERIES

From challenging miniature electronics to complex electromechanical assemblies

SMALL SERIES

Prototype and small series manufacturing. Within production growth we scale our operations accordingly

Only First Class Customer Service

We have state-of-the-art SMT assembly lines and customizable production cells, up to end-user packaging according to customers needs. In this way, we are able to efficiently and flexibly serve our customers of various sizes from different industries.

We are able to scale the production for small, medium and large series. We also manufacture prototypes and offer value-added services, material analyzes, productivity studies.

Our goal now and in the future is to fulfill customers' needs and expectations, by anticipating quality challenges and developing our capabilities. It is important that communication is right timed. We are a reliable partner working cost-effectively, without compromising on quality.

"Delivery as Promised"

Comprehensive Service and Versatile Manufacturing System

LOGISTICS

Global component sourcing, inspection and documentation.

PRODUCTION

Production in controlled environment and with modern methods.

INSPECTION

Automatic solder paste inspection (SPI), automatic optical inspection (AOI) and x-ray inspection.

DATA CONTROL

Data collection, automatic analysis, reporting, alerts and traceability

Controlled and Responsible Production Process for Entire Lifecycle of Your Product

We manufacture more than a thousand different products and we want to make our expertise available to our customers from the product design phase.

Our services and processes are designed to ensure the quality of products and operations in terms of responsible material procurement, design and delivery, from

prototype series to the end of production. We constantly invest in production equipment, information systems and the professionalism of our personnel. We follow the development of the industry and want to be pioneers, especially as a manufacturer of challenging electronics. Our production facilities meet the special requirements

of electronics production. The premises have e.g. air quality- and, humidity control with dry storage, warehouse automation and ESD equipment. We recycle waste generated in production. In addition, our factory is carbon neutral concerning heating and electricity consumption.

"Responsibility is one of the Key Criteria in Purchasing"
