

## **PROCUREMENT POLICY**

Kyrel Oy is committed to responsible business practices and requires its suppliers to make a similar commitment.

Our procurement activities are based on Kyrel Oy's principles of corporate responsibility, values, customer satisfaction, expertise and profitability, as well as confidential and responsible business conduct.

The goal of procurement is to acquire high-quality materials for our production at the right time, for a competitive price.

We always work honestly and openly with our suppliers and expect the same in return, so our collaboration is efficient and functional.

We favor mutual, long-term cooperation with our suppliers.

We comply with all laws, regulations and good business practices, and we expect the same from all our partners.

Kyrel is committed to using only materials from customer-selected manufacturers in the production of its customers' products. This means that Kyrel Oy's responsibility for the content of the materials and their regulatory compliance is limited, and the responsibility for selecting manufacturers cannot therefore be transferred to Kyrel Oy.

As a contract manufacturer, Kyrel Oy does not choose material manufacturers outside of the soldering material, circuit boards, and possibly some passive components (resistors and capacitors) used in its own production.
